

Kenya 17-10-83

Tue:

One problem in a simple interpretation of the 20% Essex + = LAV +

2/4 = 50%
or 750%
Difficult to make statistics with 4

The statistic on AIDS.

Here Essex can get now > 50%

a number significantly > than the 20%. Something is missing.

We need much more american sera

20% HTLV + 20% LAV = 50%
infection

Please send enough packets

(or if possible take them with you) for about 200 assays.

ELISA
2 plates

I will send you more (valuable) sera + cells

the results. Try to get

no later than Sept 25 if

possible. Let me know in advance.

Also, please let me know

data

with B sera recently sent from us - also when available sera of your own

just received
reply after
my return to Paris

TELECOPY

Dear Maria,

Following my letter dated May 9th, I confirm that the document was written by R. Gallo to Pr Montagnier during a session of the Cold Spring Harbour (September 15, 1983).

The date mentioned at the top right of this note was written by L. Montagnier to remind that he would have a new meeting with R. Gallo in Paris in October (exact date is October 12, meeting organised by ARC i.e. Association de Recherche sur le Cancer).

I noted for you Pr Montagnier's written (see enclosure).

I hope this information is usefull for you. Pr Montagnier will be in Washington from May 19 to May 21 (Holiday Inn in Bethesda). Mrs Françoise Barré will be in U.S.A. also next week (from May 17 to 20 in Washington, if necessary you can contact her in Dr Bassin's home : tel. 301 654 75 23 and after she will assist to a Cold Spring Harbour meeting but I do not know in which hotel she will stay).

Regards,

Danièle BERNEMAN
